## DATA PRODUCT SUITE

Internet Exchange Service  
Ethernet Exchange Service  
Dynamic Ethernet Access

# Allied Hosted PBX Service

### The Allied Voice Cloud Platform

Move your voice technology to the cloud. Take advantage of the industry's best features and stay current on the newest developments that are constantly added. This allows you to focus on your business and leave the PBX management to us.

### The On-Net Advantage

By design, your Allied voice service is not carried over the Public Internet. Instead, your voice packets remain on the Allied private network for QoS control and the highest voice quality.

- Is your LAN VoIP-Ready?
- How much bandwidth do you plan to allocate to your calls?
- What type of connection will you have between your network and your provider's switch?
- Who is responsible for managing your voice network?
- How important is uptime and Quality of Service (QoS)?

### Bandwidth Matters

- Supports aggressive 1 to 1 subscription rates
- Enables G.711 for ZERO compression
- Allows instant scalability in HOURS vs. months for new phones and employees.
- Prioritizes call volume with NO compromise of voice quality nor high-speed Internet use.

### What's Important to You

- Flat-rate predictable billing
- Simplified moves, changes, upgrades
- Advanced phone features come standard
- One vendor, one solution, one invoice
